SUBJECT INDEX

Algorithmic styles for nonlinear function generation in lumped-parameter systems 340
Analysis of circular plate-elastic half-space interaction using an energy approach 285
Analysis of numerical methods for solving the particle trajectory equation 398
Applicability of the standard k-ϵ turbulence model to gas-stirred baths 273
Application of generalized function theory on the complete solutions of plates and shells 321
Application of the finite element groundwater model FEWA to a radioactive waste disposal site 141
Approximation to methane concentrations within the graphite moderator pores of a carbon-dioxide-cooled nuclear reactor 441
Bifurcations into nonresonant quasi-periodic motions 189
Boundary element solutions of quasilinearised time-dependent infiltration 9
Boundary integral equation formulation of generalized thermoelasticity in a Laplace-transform domain 161
Boundary only procedure for time-dependent diffusion equations 610
Brebbia's indirect representation and the completeness of Papkovich-Neuber's and Boussinesq-Galerkin's solutions in elasticity 333
Buoyancy-induced heat transfer in a vertical enclosure with offset partial vertical dividers 411
Circulant matrix methods for the numerical solution of partial differential equations by FFT convolutions 44
Classification by ordering a (sparse) matrix: a "simulated annealing" approach 86
Comparison of strongly implicit procedures for the solution of the fluid flow equations in finite difference form 51
Comparison of techniques for the analysis of transmission line dynamics in electrohydraulic control systems 457
Computation of NG spread following very large LNG spills from ship tankers 238
Computation of optimal controller parameters for multivariable systems via a time-domain optimization technique 517
Computation of domains of attraction during the dynamic modelling of oscillating systems 503
Control method for speeding up response of hydroelectric station power canals 627
Decay and formation of one-dimensional nonconservative shocks 280
Decoupling precompensators for multivariable, equidimensional input-output models 249

Dependence of surface velocity in water bodies on wind velocity and latitude 202
Errors in one-step schemes for solution of the heat flow equation 491
Extension of the CVBEM to higher-order trial functions 619
Finite element model of alloy solidification incorporating velocity-dependent growth temperatures 354
Fuel and time implications of merging traffic at freeway entrances 226
Heat transfer through textile fabrics: mathematical model 434
Investigation into the numerical dispersion problem of the skew upwind finite difference scheme 98
Kinetic model for soil acidification in its context with the associated equilibrium model 256
Large-time saturated-unsaturated water and contaminant transport model in unconfined aquifers 362
Linearized solution of a flow over a ramp 406
Mathematical models of ink jet printing in thick-film hybrid microelectronics 182
Mathematical model of tractor-occupant system with a new seat suspension for minimization of vibration response 63
Mathematical model for leak location in pipelines 25
Mathematical overview of warehousing systems with single/dual order-picking cycles 2
Mathematical modelling of a steam generator for sensor fault detection 581
Mathematical modelling for the capacity planning of market oriented systems: with an application to real health data 366
Model for determining weights of traits in simultaneous multitrait selection 556
Model of residual currents and pollutant transport in the Arabian Gulf 379
Modelling long and intermediate waves in a harbor 423
Modified alternating group explicit (M.A.G.E.) method 262
Multistage multiproduct lot size sequencing of operations 593
Munk-Anderson equations and the formation of the thermocline 450
New algorithm for three-dimensional tidal and storm surge computations 471
New approach for the bending problem of shallow shell by the boundary element method 467
New method of describing bottom stress in two-dimensional hydrodynamical models of shallow homogeneous seas, estuaries, and lakes 573
Nonlinear rotorcraft analysis using symbolic manipulation 154
Numerical calculations of flow in a hydrocyclone operating without an air core 119
Optimal control problem in forest management 328
Optimal discrete-time models for continuous-time control systems 533
Outcrossing rates of marked Poisson cluster processes in structural reliability 482
Perturbation technique for parameter identification in distributed structures 167
Phenomenological combustion model for direct-injection, compression-ignition engines 293
Planning model for material flow synchronization 18
Plate vibrations using B.E.M. 78
Quasimolecular modelling of the cavity problem on a vector computer 305
Reducing the unknowns in a constrained minimisation problem—an application to material balances 204
Rheological study of lubricant gelling in synovial joints during articulation 72
Secondary currents in straight wide channels 22
Sensitivity of thermal stratification models to changing boundary conditions 31
Simulation of a store separation using the finite element method 175
Simultaneous maneuver and vibration suppression of flexible spacecraft 546
SPIDER and the boundary curvature method: simulating the solidification of foundry castings 213
Stochastic models for first-order kinetics of biochemical oxygen demand with random initial conditions, inputs, and coefficients 565
Thermal radiation effects on fires in enclosures 129
Thermodynamically consistent k-Z models for compressible turbulent flows 391
Three-stage mathematical model for handling and transporting stochastically generated materials 495
Time-dependent one-dimensional distributed optimal control problem on temperature distribution due to an internal heat source 403
Towards realistic microeconomic models of mineral exploitation: part 3 336
Transient conduction in a sphere with counteracting radiative and convective heat transfer at the surface 429
Two-dimensional shallow water flow identification 109
Two-layer model for the process of blood oxygenation in the pulmonary capillaries—parabolic profiles in the core as well as in the plasma layer 601
User-oriented operations research software 268
Wave propagation and nonequilibrium interphase processes in transient two-phase flows 312

BOOK REVIEWS

Analysis and Design of Space Frames by the Continuum Method, by L. Kollár and I. Hegedüs 634
Computational Methods and Experimental Measurements: Proceedings of the 3rd International Conference, Porto Carras, Greece, edited by G. A. Keramidas and C. A. Brebbia 346
Hydraulic Design in Water Resources Engineering: Land Drainage, edited by K. V. H. Smith and D. W. Rycroft 445
Hydrosoft '86: Hydraulic Engineering Software, edited by M. Radojkovic, C. Maksimovic and C. A. Brebbia 347
Industrial Vibration Modelling, edited by J. Caldwell and R. Bradley 346
Innovative Numerical Methods in Engineering, edited by R. P. Shaw, *et al.* 445
Intelligent Simulation Environments, edited by P. A. Luker and H. H. Adelsberger 348
"IUTAM Symposium on Fluid Mechanics in the Spirit of G. I. Taylor," *Journal of Fluid Mechanics*, vol. 173, 1986 348
Mathematics for Dynamic Modelling, by E. Beltrami 635
Nonlinear Analysis and Applications, edited by V. Lakshmikanthan 446
Optimal Design of Process Equipment, by K. Urbaniec and C. McDermott 347
Perturbation Methods, Bifurcation Theory and Computer Algebra, by R. H. Rand and D. Armbruster 634
